-  3 moduler
-  Passer for alle
-  Dybdekurs

Om veiviseren

I denne veiviseren vil du lære om hva kunstig intelligens er, hvordan det fungerer – og hvordan kunstig intelligente systemer kan brukes på en etisk og ansvarlig måte på arbeidsplassen.

<https://digitalnorway.com/kurs/kunstig-intelligens-pa-arbeidsplassen-etikk-ansvar-og-verdiskaping/>

PROGRAMMERING I GRUNNSKOLEN - NY LÆREPLAN

	Matematikk	Naturfag	Musikk	Kunst og håndverk
2	lage og følgje reglar og trinnvise instruksjonar i leik og spel			
3	lage og følgje reglar og trinnvise instruksjonar i leik og spel knytte til koordinatsystemet		Eksperimentere med rytmer, melodier og andre grunnelementer, sette sammen mønstre til komposisjoner, også ved bruk av digitale verktøy, og beskrive arbeidsprosesser og resultater	
4	lage algoritmar og uttrykkje dei ved bruk av variablar, vilkår og lykkjer			
5	lage og programmere algoritmar med bruk av variablar, vilkår og lykkjer	Utforske, lage og programmere teknologiske systemer som består av deler som virker sammen	Bruke teknologi og digitale verktøy til å skape, øve inn og bearbeide musikk	Bruke programmering til å skape interaktivitet og visuelle uttrykk
6	bruke variablar, lykkjer, vilkår og funksjonar i programmering til å utforske geometriske figurar og mønster			
7	bruke programmering til å utforske data i tabellar og datasett			
8	utforske korleis algoritmar kan skapast, testast og forbetrast ved hjelp av programmering	Utforske, forstå og lage teknologiske systemer som består av en sender og en mottaker Bruke programmering til å utforske naturfaglige fenomener	Skape og programmere musikalske forløp ved å eksperimentere med lyd fra ulike kilder	Utforske hvordan digitale verktøy og ny teknologi kan gi muligheter for kommunikasjonsformer og opplevelser i skapende prosesser og produkter
9	simulere utfall i tilfeldige forsøk og berekne sannsynet for at noko skal inntreffe ved å bruke programmering			
10	utforske matematiske eigenskapar og samanhengar ved å bruke programmering

Hvem er "dere"?

AI tools in the development process

76% of all respondents are using or are planning to use AI tools in their development process this year, an increase from last year (70%). Many more developers are currently using AI tools this year, too (62% vs. 44%).

?

Do you currently use AI tools in your development process? *

Accuracy of AI tools

Similar to last year, developers remain split on whether they trust AI output: 43% feel good about AI accuracy and 31% are skeptical. Developers learning to code are trusting AI accuracy more than their professional counterparts (49% vs. 42%).

?

How much do you trust the accuracy of the output from AI tools as part of your development workflow?

Benefits of AI tools

81% agree increasing productivity is the biggest benefit that developers identify for AI tools. Speeding up learning is seen as a bigger benefit to developers learning to code (71%) compared to professional developers (61%).

?

For the AI tools you use as part of your development workflow, what are the MOST important benefits you are hoping to achieve? Please check all that apply.

Are AI tools a threat to your job

70% of professional developers do not perceive AI as a threat to their job.

?

Do you believe AI is a threat to your current job?

Community

Extensible Cross-plattform Portable

Well documented Open Source

KOMPILERT KODE

- Raskere kode
- Klar til å kjøres når brukeren får programmet
- Et ekstra steg i utviklingen
- Låst til plattform
- Kildekoden er lukket
- Eks: C++, Java, Swift

TOLKET KODE

- Enklere å utvikle, enklere å teste
- Ikke låst til plattform
- Brukeren trenger en tolker for å kjøre programmet
- Kildekoden er åpen
- Eks: Ruby, Matlab, Python

The image displays a grid of 15 code editors, each showing a "Hello, World!" program in a different programming language. The languages and their corresponding code snippets are:

- Go**: package main; import "fmt"; func main() { fmt.Println("Hello World") }
- lolo**: "Hello, world!" println
- Java**: class helloWorld { public static void main(String args[]) { System.out.println("Hello World"); } }
- JavaScript**: alert('Hello World');
- Objective-C**: #import <stdio.h> #import <Foundation/Foundation.h> int main(void) { NSLog(@"Hello, world!\n"); return 0; }
- Pascal**: Program HelloWorld; Begin Writeln ('Hello World'); End.
- Perl**: #!/usr/bin perl -w print ("hello world");
- PHP**: <?= "Hello world\n" ?>
- Postscript**: %! /Helvetica 20 selectfont 100 100 moveto (Hello World) show showpage
- Prolog**: main :- write('Hello, world!'), nl.
- Python**: print('Hello World')
- React**: ReactDOM.render(<h1>Hello, world!</h1>, document.getElementById('root'));
- REXX**: say "Hello World"
- Ruby**: #!/usr/local/bin/ruby -w puts "Hello world"
- Scala**: object HelloWorld extends App { println("Hello World") }
- Smalltalk**: Transcript show: 'Hello, world!'.
Transcript show: 'Hello, world!'.
- Standard ML**: print "Hello World\n";
- Swift**: println("Hello, world")

>>> import this
The Zen of Python, by Tim Peters

Beautiful is better than ugly.
Explicit is better than implicit.
Simple is better than complex.
Complex is better than complicated.
Flat is better than nested.
Sparse is better than dense.
Readability counts.
Special cases aren't special enough to break the rules.
Although practicality beats purity.
Errors should never pass silently.
Unless explicitly silenced.
In the face of ambiguity, refuse the temptation to guess.
There should be one-- and preferably only one --obvious way to do it.
Although that way may not be obvious at first unless you're Dutch.
Now is better than never.
Although never is often better than *right* now.
If the implementation is hard to explain, it's a bad idea.
If the implementation is easy to explain, it may be a good idea.
Namespaces are one honking great idea -- let's do more of those!

PEP 8 – Style Guide for Python Code

Author: Guido van Rossum <guido at python.org>, Barry Warsaw <barry at python.org>, Nick Coghlan <ncoghlan at gmail.com>

Status: Active

Type: Process

Created: 05-Jul-2001

Post-History: 05-Jul-2001, 01-Aug-2013

► Table of Contents

Introduction

This document gives coding conventions for the Python code comprising the standard library in the main Python distribution. Please see the companion informational PEP describing [style guidelines for the C code in the C implementation of Python](#).

This document and [PEP 257](#) (Docstring Conventions) were adapted from Guido's original Python Style Guide essay, with some additions from Barry's style guide [2].

This style guide evolves over time as additional conventions are identified and past conventions are rendered obsolete by changes in the language itself.

Many projects have their own coding style guidelines. In the event of any conflicts, such project-specific guides take precedence for that project.

A Foolish Consistency is the Hobgoblin of Little Minds

One of Guido's key insights is that code is read much more often than it is written. The guidelines provided here are intended to improve the readability of code and make it consistent across the wide spectrum of Python code. As [PEP 20](#) says, "Readability counts".

A style guide is about consistency. Consistency with this style guide is important. Consistency within a project is more important. Consistency within one module or function is the most important.

However, know when to be inconsistent – sometimes style guide recommendations just aren't applicable. When in doubt, use your best judgment. Look at other examples and decide what looks best. And don't hesitate to ask!

In particular: do not break backwards compatibility just to comply with this PEP!

Hello World
in-progress 1 iteration
Exercism's classic introductory exercise. Just say "Hello, World!".

Guido's Gorgeous Lasagna
Recommended Learning Exercise
Learn the basics of Python by cooking Guido's Gorgeous Lasagna.

Ghost Gobble Arcade Game
Available Learning Exercise
Learn about bools by setting up the rules for the Ghost Gobble arcade game.

Currency Exchange
Available Learning Exercise
Learn about numbers by solving Chandler's currency exchange conundrums.

Meltdown Mitigation
Available Learning Exercise
Learn about conditionals and avoid a meltdown by developing a simple control system for a Nuclear Reactor.

Black Jack
Available Learning Exercise
Learn about comparisons by implementing some Black Jack judging rules.

Little Sister's Essay
Available Learning Exercise
Learn about string methods while improving your little sister's school essay.

Little Sister's Vocabulary
Available Learning Exercise
Learn about strings by helping your little sister with her vocabulary homework.

--- Day 1: Trebuchet?! ---

Something is wrong with global snow production, and you've been selected to take a look. The Elves have even given you a map; on it, they've used stars to mark the top fifty locations that are likely to be having problems.

You've been doing this long enough to know that to restore snow operations, you need to check all **fifty stars** by December 25th.

Collect stars by solving puzzles. Two puzzles will be made available on each day in the Advent calendar; the second puzzle is unlocked when you complete the first. Each puzzle grants **one star**. Good luck!

You try to ask why they can't just use a **weather machine** ("not powerful enough") and where they're even sending you ("the sky") and why your map looks mostly blank ("you sure ask a lot of questions") and hang on did you just say the sky ("of course, where do you think snow comes from") when you realize that the Elves are already loading you into a **trebuchet** ("please hold still, we need to strap you in").

As they're making the final adjustments, they discover that their calibration document (your puzzle input) has been **amended** by a very young Elf who was apparently just excited to show off her art skills. Consequently, the Elves are having trouble reading the values on the document.

The newly-improved calibration document consists of lines of text; each line originally contained a specific **calibration value** that the Elves now need to recover. On each line, the calibration value can be found by combining the **first digit** and the **last digit** (in that order) to form a single **two-digit number**.

For example:

```
1abc2  
pqr3stu8vwx  
a1b2c3d4e5f  
treb7uchet
```

In this example, the calibration values of these four lines are **12**, **38**, **15**, and **77**. Adding these together produces **142**.

Consider your entire calibration document. What is the sum of all of the calibration values?
